

Topic	Data Analysis by visualization	
Class Description	Students use class assessment data collected from a mobile app and analyze it by visualizing through drawing graphs. Students identify the trouble spots or concept areas where students need more reinforcement - both at the class level and at student level.	
Class	C107	
Class time	45 mins	
Goal	<ul style="list-style-type: none"> Understand and study the assessment data collected from the mobile app Choose a visualization graph to represent the data in a meaningful way Use tools in pandas to process the data and draw the graph using plotly 	
Resources Required	<ul style="list-style-type: none"> Teacher Resources <ul style="list-style-type: none"> Laptop with internet connectivity Earphones with mic Notebook and pen Student Resources <ul style="list-style-type: none"> Laptop with internet connectivity Earphones with mic Notebook and pen 	
Class structure	Warm Up Teacher-led Activity Student-led Activity Wrap up	5 mins 15 min 15 min 5 min
<div>CONTEXT</div> <ul style="list-style-type: none"> Give context to the students on the use of data analysis in student assessments. 		
Class Steps	Teacher Action	Student Action

<p>Step 1: Warm Up (5 mins)</p>	<p>Hi <Student Name>! Can you quickly recall what we have learned in the last few classes?</p>	<p>ESR:</p> <ul style="list-style-type: none"> - We learned how to visualize data using bar charts, line charts and scatter plots. - We studied about the central tendency of data- mean, median and mode. - We learned about standard deviation using which we can understand how much data differs from the central tendency. - We also learned about correlation and how to identify if one data depends on the values of others.
	<p>Amazing! Today, we are going to apply some of these concepts to real-life data and gauge the power of analyzing data by visualizing it.</p> <p>Before we do that, can you think of some of the areas where analyzing data might be useful?</p>	<p>ESR:</p> <p>The <i>student mentions some of the areas where they think analyzing data might be useful.</i></p> <p><i>Some of the areas which students can come up with are banking, budget tracking, etc.</i></p>
	<p>What about learning? Can analyzing data be helpful or useful in learning?</p> <p>Allow the student to think for sometime on it.</p>	<p><i>The student can come up with varied responses.</i></p>
<p>Teacher Initiates Screen Share</p>		

CHALLENGE

- Filter the data using tools in pandas
- Use Plotly graph objects to represent the data and show the trouble spot for the class of students

<p>Step 2: Teacher-led Activity (15 min)</p>	<p>We have some data with us from a live app on PlayStore / AppStore. The app - PixelMath - allows students from different grades to login and solve math questions aligned to their Maths Textbook in a gamified way.</p> <p>Show the csv data to the student. <Teacher opens the link from Teacher Activity 1></p> <p>What do you understand from the data?</p> <p><this is a snap of data. see full data by opening the link></p>	<p>ESR: varied</p>
---	--	-------------------------------

```

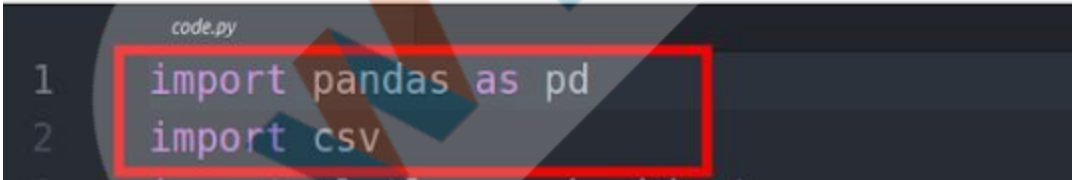

student_id,level,attempt
TRL_xsl,Level 4,1
TRL_xsl,Level 1,1
TRL_xsl,Level 2,1
TRL_xsl,Level 3,1
TRL_xsl,Level 4,1
TRL_xsl,Level 2,1
TRL_xsl,Level 2,1
TRL_xsl,Level 3,1

TRL_xsl,Level 2,1
TRL_xsl,Level 1,1

```

The data is for 12 students of Grade 3 who played Lesson 1 in the app. The Lesson 1 is divided into four levels aligned to the four different concepts covered in the lesson.

Each row in the data represents - unique student id, level which the

	<p>student was playing and whether the student got the question right (1) or wrong (0).</p> <p>For example- the first row: TRL_xsl,Level 4,1</p> <p>TRL_xsl - > unique student id Level 4 -> Student is playing level 4 (or concept 4) 1 -> the student has answered the question correctly.</p> <p>The data represents attempts of 12 different students from a class who practiced Lesson 1 using the app.</p> <p>Look at the data again (in the csv file) and see if you can understand the data. Are there any conclusions you can draw by looking at the data?</p>	<p><i>The student looks at the raw data and attempts to make some conclusions by looking at the data.</i></p>
	<p>What would a teacher - who is teaching these students - like to know from the data? What would each student like to know from the data?</p>	<p><i>The teacher would like to know which concept the class is strong in and which concept the class finds challenging.</i> <i>The teacher would also like to know the performance of each child in the different concepts.</i></p>
	<p>Let us see if we can use the python skills and tools we have to get this information. Let us download the data in our local machine.</p>	<p><i>Student observes.</i></p>

	<p><i>Teacher downloads the data on the local machine and places it in a folder titled "PixelMath Data".</i></p> <p>Let us create a new file in the folder called code.py. We are going to write the code in code.py to analyze the data.</p>	
	<p>We can open code.py on Visual Studio Code or another editor to write the code.</p> <p>What would we like to do first?</p>	<p>ESR: We would like to read the data from our data file.</p>
	<p>How do we read the data from a csv file?</p> <p><i>Help the student recall how to read data from the csv file.</i></p>	<p>ESR: We can use dataframes in pandas.</p>
	<p>Let us first import pandas and csv.</p> <p><i>Teacher writes code to import pandas and csv.</i></p>	<p><i>The student helps the teacher in importing pandas and csv.</i></p>
		
	<p>pandas has a read_csv function which can read a csv file and store it as a dataframe object.</p> <p>Do you remember what a dataframe object in python is?</p>	<p>ESR: Dataframe is a 2D labeled data structure having multiple columns.</p>

	<p>Yes!</p> <p>Teacher writes code to read the csv file and store it in a dataframe object.</p> <p>The teacher can also print the dataframe object and run the code to show what the dataframe object contains.</p>	<p>Student observes and guides the teacher to write the code.</p> <p>The student sees the output has 1654 different attempts by 12 students of Grade 3 class.</p>
		
	<p>We want to understand - for each level- what was the performance of all the students.</p> <p>What can we do to get this?</p>	<p>ESR: varied</p>
	<p>One way would be to group the data by each level and then get the mean value of all the attempts for each level.</p> <p>Comparing the mean would tell us how the students performed across the different levels.</p>	<p>Student reflects on this and asks questions.</p>
	<p>pandas dataframe object has functions which can help us do that.</p> <p>Teacher writes code to group the data by level and calculate the mean for the attempts in the level.</p>	<p>Student tries to understand the code and observes the output.</p>

	Teacher runs the code to show the output to the kid.	
<pre>code.py 1 import pandas as pd 2 import csv 3 import plotly.graph_objects as go 4 5 df = pd.read_csv("data.csv") 6 7 print(df.groupby("level")["attempt"].mean()) 8</pre> <pre>Pixel Math data\$ python3 code.py</pre> <pre>Level Level 1 0.751445 Level 2 0.863281 Level 3 0.698113 Level 4 0.734694 Name: attempt, dtype: float64</pre>		
	What does the output tell you?	ESR: It tells us that the students have performed best in Level 2 and least in Level 3. The teacher might have to re-teach or reinforce concept 3 in the class.
	Good analysis. Now, let us try to visually represent it for the teacher. We're going to use the graph_objects in plotly to draw a horizontal bar graph. <i>Teacher uses plotly graph_objects to draw a horizontal bar graph.</i>	<i>Student observes and asks questions.</i>

	<p>First we'll import plotly graph_objects as go.</p> <p>Using the go.Bar method we'll plot the mean that we found before on X axis and the list of levels on Y axis.</p> <p>Then use fig.show to show the graph.</p>	
<pre> code.py 1 import pandas as pd 2 import csv 3 import plotly.graph_objects as go 4 5 df = pd.read_csv("data.csv") 6 7 print(df.groupby("level")["attempt"].mean()) 8 9 fig = go.Figure(go.Bar(10 x=df.groupby("level")["attempt"].mean(), 11 y=['Level 1', 'Level 2', 'Level 3', 'Level 4'], 12 orientation='h')) 13 14 fig.show() 15 </pre>		
	<p><i>Teacher runs the code and shows the output.</i></p> <p>What do you see?</p>	<p>ESR:</p> <p>We can clearly see that students have performed the least in level 3 and best in level 2.</p>

	This data gives the teacher inputs on where he/she can spend time with the students.	-
	<p>The data visualization and analysis we did was for all the students in Grade 3.</p> <p>What if we wanted to understand how each student performed across the different levels?</p> <p>For example:</p> <p>Can you do the same analysis for a student with id - TRL_987 and understand how this student performed in the different levels?</p>	<p>ESR:</p> <p>Yes!</p>
	Let's try.	

Teacher Stops Screen Share

	Now it's your turn. Please share your screen with me.	
<ul style="list-style-type: none"> • Ask Student to press ESC key to come back to panel • Guide Student to start Screen Share • Teacher gets into Fullscreen 		
<p style="text-align: center;">ACTIVITY</p> <ul style="list-style-type: none"> • Filter the data for each student using tools in pandas. • Use Plotly graph objects to represent the data and show the trouble spot for a particular student. 		
Step 3: Student-Led Activity (15 min)	<p>Guide the student to download the data.csv file on their local machine and move it to a folder where they are working.</p>	<p>The student downloads the file and moves it to their working directory. <Student downloads data from student activity 1></p>
<div> <pre>student_id,level,attempt TRL_xsl,Level 4,1 TRL_xsl,Level 1,1 TRL_xsl,Level 2,1 TRL_xsl,Level 3,1 TRL_xsl,Level 4,1 TRL_xsl,Level 2,1 TRL_xsl,Level 2,1 TRL_xsl,Level 3,1 TRL_xsl,Level 4,1 TRL_xsl,Level 3,1 TRL_xsl,Level 3,1 TRL_xsl,Level 1,1 TRL_xsl,Level 2,1 TRL_xsl,Level 3,1 TRL_xsl,Level 1,1 TRL_xsl,Level 4,1 TRL_xsl,Level 4,1 TRL_xsl,Level 4,0 TRL_xsl,Level 1,1 TRL_xsl,Level 1,1 TRL_xsl,Level 2,1 TRL_xsl,Level 1,1 TRL_xsl,Level 2,1 TRL_xsl,Level 4,1</pre>  </div>		

	<p>Guide the student to create a new python file where they will write their code in the same working directory.</p>	<p>The student creates a new file called <code>final.py</code> where they will be writing code for this class.</p>
		
	<p>Guide the student to read the csv file and store the data in a dataframe object</p> <p>Ensure that the student has csv and pandas installed.</p>	<p>The student writes code to read the <code>data.csv</code> file.</p>
		

	<p>We want to filter out all data with student id TRL_987.</p> <p>df.loc will help us filter out all the rows with the given student id. We need to create a filter with df['student_id'] == "TRL_987" and pass it to df.loc.</p> <p>We will get a new dataframe object with only the given student id. You can print it.</p> <p><i>Guide the student to write code for this.</i></p>	<p><i>The student writes code to filter out the data with student id TRL_987 and prints it.</i></p>
<pre> final.py 1 import pandas as pd 2 import csv 3 import plotly.graph_objects as go 4 5 df = pd.read_csv("data.csv") 6 7 student_df = df.loc[df['student_id'] == "TRL_987"] 8 </pre>		
	<p>Now, you can find the mean of the attempts for each level for the student.</p> <p>You can also use the graph_objects in plotly to draw a bar graph for this. <i>Guide the student to draw a bar graph which visually represents the mean values for each level for the student.</i></p>	-

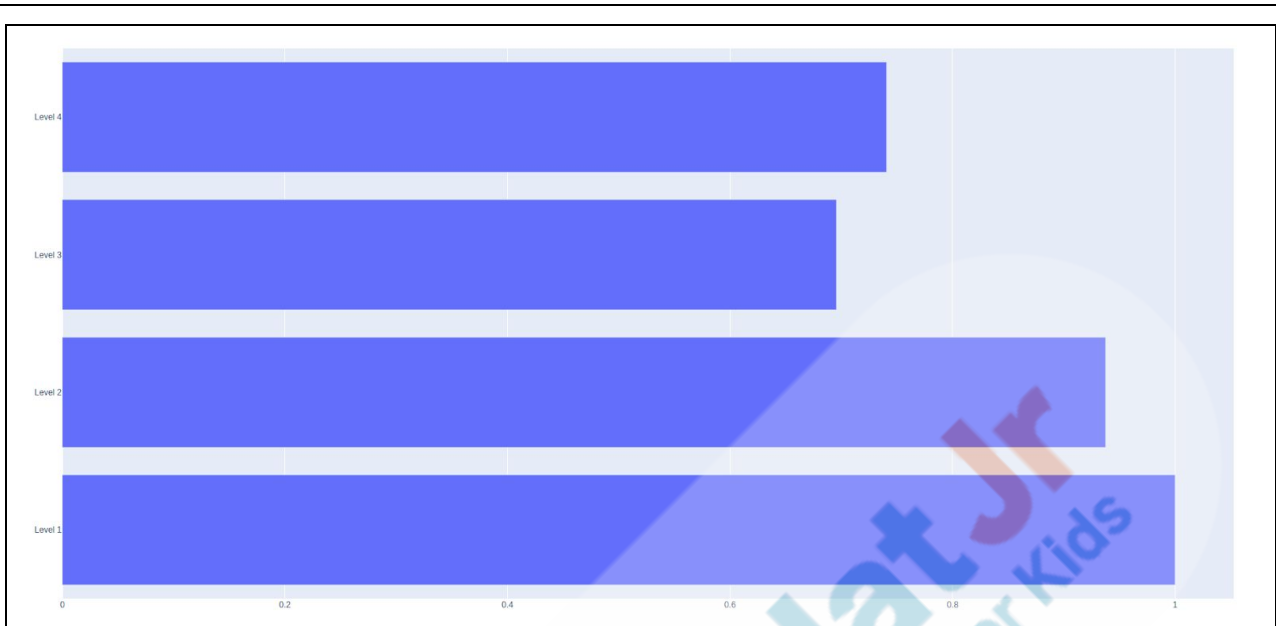

```

final.py
1  import pandas as pd
2  import csv
3  import plotly.graph_objects as go
4
5  df = pd.read_csv("data.csv")
6
7  student_df = df.loc[df['student_id'] == "TRL_987"]
8
9  print(student_df.groupby("level")["attempt"].mean())
10
11  fig = go.Figure(go.Bar(
12      x=student_df.groupby("level")["attempt"].mean(),
13      y=['Level 1', 'Level 2', 'Level 3', 'Level 4'],
14      orientation='h'))
15
16  fig.show()
17

```

What does the bar graph show?

The student looks at the graph and analyzes the performance of the student in different levels.

Data visualization can be a powerful tool to give us findings which might go unnoticed otherwise.
We'll keep learning more about data visualization and different data analysis in the upcoming classes.

-

Teacher Guides Student to Stop Screen Share

FEEDBACK

- Appreciate the student for their efforts
- Identify 2 strengths and 1 area of progress for the student

Step 4: Wrap-Up (5 min)

Let's review what we did in today's class.

ESR:

- We took assessment data from a math practice app.
- We processed it using dataframe objects and made visual representations to analyze the class performance and individual student performance for different concepts.

	<p>I hope you found these simple data visualizations exciting in terms of the communication they make. We'll be doing many other and different kinds of data visualization.</p> <p>Next class, we will study a very useful pattern which all the collected data often follow!</p>	-
<div>Teacher Clicks</div> <div>✕ End Class</div>		
Additional Activities	<p><i>Encourage the student to write reflection notes in their reflection journal using markdown.</i></p> <p>Use these as guiding questions:</p> <ul style="list-style-type: none"> • What happened today? <ul style="list-style-type: none"> - Describe what happened - Code I wrote • How did I feel after the class? • What have I learned about programming and developing games? • What aspects of the class helped me? What did I find difficult? 	<p><i>The student uses the markdown editor to write her/his reflection in a reflection journal.</i></p>
